## **Successful Appearance for PITSID GmbH at FachPack**

The Polygrafische innovative Technik Leipzig GmbH (PITSID), an affiliate company of the Sächsisches Institut für die Druckindustrie (SID), has successfully completed its appearance at FachPack in Nuremberg from September 24-26, 2019.

Almost 1,600 exhibitors presented a comprehensive range of products from around the industry to around 44,000 visitors from all over the world. Many interested visitors came to the PITSID stand in Hall 9 to find out about the latest developments from the device manufacturer. Particular attention was paid to the newly developed measuring device NIP CON SMART, which is used to adjust the pressure between two roller pairs. Thanks to its innovative and intuitive operation via tablet, it was able to attract the interest of trade show visitors.

PITSID also presented the Separating Force Gauge PEEL CONTROL, which was designed with the needs of the packaging industry in mind. The compact device is particularly suitable for use on-site, e.g. on packaging lines. The forces which occur when opening containers sealed by a seam or for separating welded and laminated materials are measured.

Particular attention was paid to the newly developed method for calculating the dimensions and shape of flat objects. The areas of application are the paper and finishing industries as well as all other branches where the exact measurement of such objects is required.

The practical demonstrations of the devices and their possible applications attracted a great deal of attention. The visitors to the stand appreciated the demonstrations and were impressed by the ease of use as well as the clarity and transparency of the devices' operation.

Geschäftsführer  
Dr.-Ing. Jürgen Stopporka

"The participation of our company as an exhibitor at FachPack 2019 was fully justified solely by the number of contacts and the concrete inquiries that resulted from our presence," said Beatrix Genest, authorized signatory of PITSID GmbH at the end of the event. "Personal contact with customers always proves its worth. We were also able to gather valuable information about the variety of applications present within the industry for the development of new measuring devices that are even better geared to the needs of companies. We are very pleased with the results of our company's very successful and effective appearance at the trade show".
